

Bayley Construction (Mercer Island, WA) conference room after FabriTrak installation.

BAYLEY

Bayley Construction is based out of Mercer Island, Washington and focuses on commercial construction. They approached us with the need to improve the sound quality of their conference rooms.

Bill Littler, a seasoned sales team member, worked closely with Nick Clifford of Bayley Construction to create the best design for the space.

Bill and Nick settled on FabriTrak with a 1" TerraCore Poly Tackable which would utilize a wide array of fabrics.

Glass features and high ceilings in the conference room caused an echo chamber to be created. The goal of the install was to create an acoustical barrier that would allow for a much quieter meeting space for the company and their needs.

The project created an aesthetically pleasing look to the wall of the conference room, and tied in with Bayley Construction's company colors. Our install team was, "...great in the field and did a great job installing the fabric panels onsite" according to Nick Clifford.

Shane Posey, who is now part of our sales team, was involved in the install of this project. When asked how he would describe working with Bayley he stated, "They were warm, receptive, welcoming and excited". This was met with Nick Clifford's acknowledgment of, "...[Architextures] was a pleasure to work with, and are very responsive and professional."
